

A COMPLETE PLATFORM

Online portals for complete control and management! With the portals you can manage access for a large number of people safely and efficiently.

One management environment for you and one for your customer!

Integrator Portal

It is possible to view the map of all installed equipment and track online their operation and movements of people in the environments that your company is managing. You can also configure the equipment and upgrade it remotely by enabling and disabling contracts.

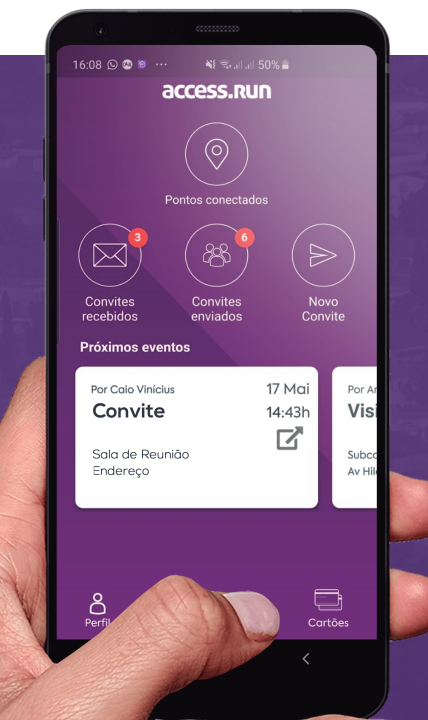

Customer Portal

Your customers will also be able to set up a multitude of access levels and profiles, send notifications via pushes, control reservable spaces with capacity of people by schedule, send and customize notifications such as mailing, meetings, assemblies. It is possible also to access functionalities such as dashboards, latest movement reports, and more.

INTEGRATION APIS

Access.run also has APIs ready to integrate your solution! We will always be open to assisting partners who want to own a custom platform. Enabling benefits such as data security and ease of exchange between information with different programming languages, compatible with our equipment.

FIRST EXPRESS ACCESS OF PEOPLE IN THE WORLD!

Much more than authorizing access, the Access.run application gives you control and autonomy.

- Never face queues again!
- Registration of facial or biometric reading for login;
- Sending personalized invitations with time and category control;
- Notifications of the arrival of visitors of dependents;
- No need for door selection;
- No need for previous pairing with Bluetooth locks;
- Universal App: Same App for any environment

Do you want to try it? [Google Play](#) [App Store](#)

ATS

The true concept of internet of things in a single device. Just with approaching the phone, cards, wristbands or Access.run tags your access will be released.

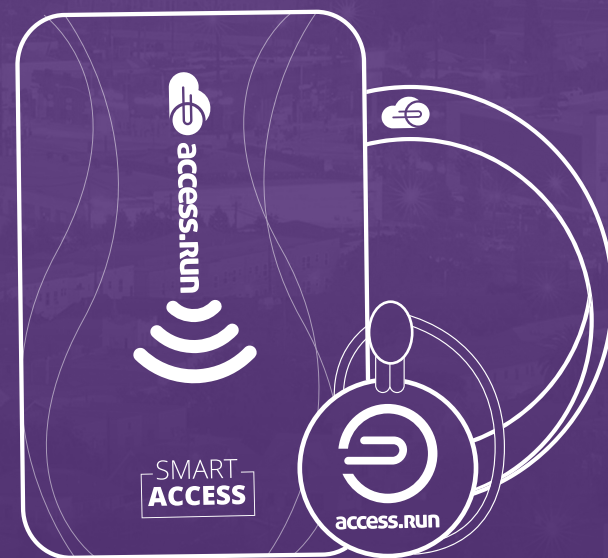

The ATS is easy to install and high strength, can be installed on doors, gates, barriers and turnstiles. No need for controllers or complementary equipment. It also has the size of a credit card, can be integrated with other access control equipment, with low power consumption and can be connected directly to the internet.

Wi-Fi
ETH
Power Consumption: 5W
Dimensions: 10,2 x 6 cm

AR.CHECK

ArCheck is a perfect app for those who don't give up the presence of an attendant. With it, it is enough for the attendant to approach his smartphone close to the visitor's smartphone for access to be released. The app streamlines the checking and updating of visitor registration, and can even attach images and documents to the check-in and check-out, ensuring even more security. It's a perfect tool for managing events or even turning your attendant into a concierge.

INTEGRATION WITH DEVICES

In addition to express access, Access.run is also integrated with various devices such as:

- Smart Cards;
- Bank bracelets
- Tags;
- Credit cards.

ENDLESS POSSIBILITIES

Access.run is an extremely versatile platform serving different establishments with easy installation and cloud data.

CONDOMINIUMS

More convenience for residents and visitors, quick access to the condominium with easy identification and control, streamlining the management work of the syndic and also the porters and caretakers.

COMPANIES

Full control of entry and exit of employees, with reports and push notifications on the manager's smartphone. Much more convenience to receive guests and customers.

COWORKINGS

Convenient access control for a place of high turnover of people. Customers can book the schedules and receive the invitation to access at the time and place indicated. More security and better service.

HOSPITALS AND CLINICS

Patients can also have more agility by avoiding waiting in the offices. They can have access authorization at the right time of consultation, facilitating the management control of the clinic, and improving the well-being of patients.

SHOPPINGS

From parking to shopping, Access.run can keep up with the consumer's journey by giving shopkeepers and managers with relevant information about their consumers.

PARKING

Intelligent and autonomous parking lots. Customers can validate their tickets through their mobile phone, giving them greater control of time, vacancies and payments.

GYMS

Besides the possibility of access control, it is possible to know online the amount of movement of people per hour. More convenience for customers and employees.

EVENTS

From the entrance to the exit of the event. Much more comfort and safety with the end of the lines! Control for the organizer with guests checking, movement and people reports.
